

files, each of the plurality of said resource files containing text in a different language such that said replacement variable will be replaced with text in a language governed by the selection of the selected one of said resource files.

Sub
D1

4. The user interface of claim 3, wherein:
a particular one of the plurality of said resource files is selected according to a language code.

5. The user interface of claim 3, wherein:
said resource file is an HTML ResourceBundle.

7. The user interface of claim 3, wherein:
a constructed markup-language code is built at a server by combining said markup-language encoded template and data from said resource file.

8. The user interface of claim 7, wherein:
the server builds the constructed markup-language code by substituting said replacement variable with data from said resource file.

9. The user interface of claim 3, and further including:
Java code within said markup-language template; and
a JAR file containing a Java ResourceBundle.

10. The user interface of claim 3, and further including:
a plurality of said resource files such that said replacement variable is selectively replaced by data from a selected one of said resource files to produce a constructed markup-language code page;

Java code within said markup-language template; and
a JAR file containing a Java ResourceBundle; wherein

the constructed markup-language code page and the JAR file are transmitted to a browser.

ad ^{sub B2} 11. A method for constructing a web based user interface, comprising:
providing an HTML template to a server, said HTML template including at least one variable;
providing a plurality of data files to the server, each of said plurality of data files having therein a different language data portion corresponding to said variable;
selecting one of said plurality of data files; and
constructing an HTML encoded user interface file by substituting the data portion from the selected one of said plurality of data files into said HTML template to replace said variable.

^{sub B3} 21. A computer program product comprising a computer usable medium having a computer readable code embodied thereon configured to operate on a computer, comprising:
a markup-language encoded template having a replacement variable within; and
a plurality of resource files containing data for replacing said replacement variable, said replacement variable being selectively replaced by data from a selected one of said resource files, each of the plurality of said resource files contains text in a different language such that said replacement variable will be replaced with text in a language governed by the selection of the selected one of said resource files.

22. The computer program product of claim 21, wherein:
said resource files are HTML ResourceBundles that each contain alternative data to be selectively substituted for said variables.
